

When Applications Can Roam Freely

Stan Moyer, President, OSGi Alliance
January 8, 2006

The Topic

- Many standardization efforts are about how different computers communicate; both on protocol and hardware level.
- The OSGi Alliance took another route and standardized the execution context.
- The OSGi vision is that many devices, large and small, can run the same applications, despite differences in hardware, capacity and performance.
- OSGi technology is already being delivered in products and services shipping from numerous Fortune Global 100 companies.
- Based on their experiences with the OSGi service platform in the different markets, the panelists will discuss
 - the next steps to create compelling solutions
 - including applications that meet consumer expectations in a networked home car and mobile environment.

The Panelists

- **OSGi™ Technology Overview** — **Peter Kriens**, OSG Evangelist, OSGi Fellow, and Technology Officer OSGi Alliance
- **The Connected Home** — **Vince Izzo**, Business Development, Motorola
- **The Home Gateway Initiative and OSGi Technology** **Paolo Pastorino**, CTO, Home Gateway Initiative
- **Automotive Applications of OSGi Technology** — **Da Marples**, Chief Architect, EU Global System for Telematics, Chief Scientist, Telcordia Technologies, an OSGi Fellow
- **OSGi Technology on Mobile Phones** — **Jon Bostror** Chief Architect, Java, Nokia
